

Meeting Title: FINAL3

Minutes of Meeting:

Summary by Topics

- Progress of Intelligent Job Notification System
- Machine Learning Pipeline Improvement
- Semantic Embeddings
- Cosine Similarity
- Backend Performance
- Scalability
- Security Measures
- Frontend Dashboard
- Automation
- Email Notifications
- SMS Integration
- Threshold Tuning

Key Discussion Points

- Detailed progress of Intelligent Job Notification System
- Improvement in Machine Learning Pipeline
- Use of Semantic Embeddings instead of basic keyword matching
- Cosine Similarity calculation
- Conversion of Vector Representation for system and student skills descriptions
- Current backend performance
- Asynchronous Tasks for sending emails
- Scalability measures for future data growth
- Integration for faster Cosine Similarity search
- Implementation of Role-Based Access Control (RBAC)
- Clean frontend dashboard
- UI polishing
- Simple explanation of Machine Learning Pipeline for demo judges
- Automation of email notifications with Cosine Similarity Similarity Score

- Adding SMS integration to future roadmap
- Optimization of Threshold Tuning
- Currently set at 0.6

Decisions

- Integrate phase for faster Cosine Similarity search
- Implement Role-Based Access Control (RBAC)
- Update UI and build push within the next 5 days
- Prepare Machine Learning Evaluation Report

Action Items

- task: Update UI and build push, owner: Guest-2 or Unassigned, due_date: 2023-XX-XX, priority: High, confidence_score: 75
- task: Prepare Machine Learning Evaluation Report, owner: Guest-2 or Unassigned, due_date: 2023-XX-XX, priority: High, confidence_score: 75

Risks

No data available.
