

Meeting Title: qwen

Minutes of Meeting:

Summary by Topics

- Progress on Intelligent Job Notification System and Machine Learning Pipeline improvements
- Backend performance metrics and scalability planning
- Security measures and frontend dashboard updates
- Automation status and future roadmap considerations

Key Discussion Points

- Machine Learning Pipeline now uses Semantic Embeddings instead of basic keyword matching
- Cosine Similarity is being calculated between job descriptions and student skills in Vector Representation
- Backend Performance handles 1000 students with under 2 seconds response time
- Asynchronous Tasks handle email notifications in the background
- Security includes Bcrypt hashing and Role-Based Access Control (RBAC)
- Frontend Dashboard requires further polishing for demo
- Threshold Tuning for Cosine Similarity Score is currently set at 0.6
- SMS integration proposed for future roadmap

Decisions

- Agreement on using Semantic Embeddings and Cosine Similarity for job matching
- Confirmation of current Backend Performance metrics and scalability approach
- Decision to polish Frontend Dashboard for demo presentation
- Approval of current security measures (Bcrypt and RBAC)

Action Items

- task: Update UI for demo, owner: Guest-2, due_date: tomorrow, priority: High, confidence_score: 60

- task: Prepare Machine Learning Evaluation Report, owner: Guest-2, due_date: next 5 days, priority: High, confidence_score: 75
- task: Optimize Threshold Tuning for Cosine Similarity Score, owner: Unassigned, due_date: Not specified, priority: Medium, confidence_score: 40
- task: Implement SMS integration in future roadmap, owner: Unassigned, due_date: Not specified, priority: Low, confidence_score: 40
